

Play Lite v2 Firmware Upgrade Instructions

NB: New firmware should only be installed if your player is exhibiting problems with its operating system. No features have been added – if your player is functioning correctly, please do not apply this update.

1. Firstly, download the latest firmware file from the “Firmware” section of this web-page: <http://www.sosmp3.com/mp3s.asp?id=7>. It is suggested that you save this file somewhere you can easily locate it later, such as your desktop.
2. On the driver CD supplied with your MP3 player, open the folder named “For Windows”. Then double-click the file named “Setup”. Follow the on-screen instructions to install the software. The latest version of the MP3 Player Utilities software is available for download from www.SOSmp3.com.
3. Once you have installed the MP3 Player Utilities software, disconnect from the internet, then switch off any anti-virus, firewall or spyware-blocking software as these can interfere with the software installation process. Please plug in your MP3 player and run the software. To do this, click Start > All Programs > MP3 Player Utilities > MP3 Player Update Tool.
4. Once the MP3 Player Update Tool is running, click on “Select new firmware file”. You should then browse to wherever you saved the latest firmware file you downloaded previously (for example, on your desktop). Once located, double-click on the firmware file to select it.
5. Click “Begin upgrading”. When complete, you will receive an “Upgrade successful” message.
6. Unplug your player and use normally. Please note that you may have to reload any music you had stored on the player, as this may have been erased during the upgrade process.
